

The install worked successfully! Congratulations!

You are seeing this page because `DEBUG=True` is in
your settings file and you have not configured any
URLs.

INI CARAKU SETUP DJANGO

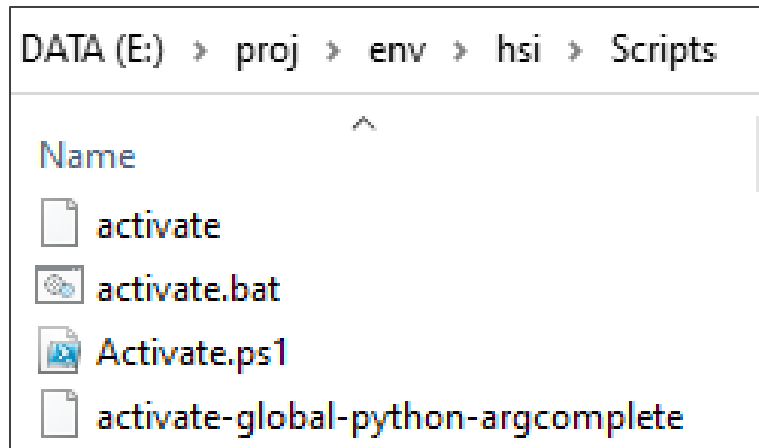

1. Tes Import Django

filesaya.py

```
if __name__ == '__main__':  
    try:  
        from django.core.management import execute_from_command_line  
        print("Mengimport Django.", "BERHASIL")  
    except ImportError as exc:  
        print("Mengimport Django.", "GAGAL")
```

```
d:\proj\bootcamp-django> python filesaya.py
```

Tes Import Django. Gagal? Cek env

```
d:\proj\bootcamp-django> e:\proj\env\hsi\Scripts\activate
```

```
(hsi) d:\proj\bootcamp-django> python filesaya.py
```

2. DJANGO_SETTINGS_MODULE

filesaya.py

```
if __name__ == '__main__':  
    try:  
        from django.core.management import execute_from_command_line  
        print("Mengimport Django.", "BERHASIL")  
    except ImportError as exc:  
        print("Mengimport Django.", "GAGAL")  
  
    os.environ.setdefault('DJANGO_SETTINGS_MODULE', 'configsaya')  
    execute_from_command_line(sys.argv)
```

d:\proj\bootcamp-django> python filesaya.py

d:\proj\bootcamp-django> python filesaya.py runserver

DJANGO_SETTINGS_MODULE. Gagal?

```
d:\proj\bootcamp-django> python filesaya.py
```

Note that only Django core commands are listed as settings are not properly configured (error: No module named 'configsaya').

```
d:\proj\bootcamp-django> python filesaya.py runserver
```

```
File "<frozen importlib._bootstrap>", line 971, in _find_and_load
  File "<frozen importlib._bootstrap>", line 953, in
_find_and_load_unlocked
ModuleNotFoundError: No module named 'configsaya'
```

Buat file kosong (configsaya.py)

filesaya.py

```
. . .
```

```
os.environ.setdefault('DJANGO_SETTINGS_MODULE', 'configsaya')  
execute_from_command_line(sys.argv)
```

configsaya.py (file kosong)

```
d:\proj\bootcamp-django> python filesaya.py
```

```
d:\proj\bootcamp-django> python filesaya.py runserver
```

configsaya.py (file kosong). Gagal?

```
The SECRET_KEY setting must not be empty.
```

Tambah SECRET_KEY

configsaya.py

```
SECRET_KEY = 'katasandisayainisusah'
```

```
CommandError: You must set settings.ALLOWED_HOSTS if DEBUG is False.
```

Tambah DEBUG = True

configsaya.py

```
SECRET_KEY = 'katasandisayainisusah'  
DEBUG = True
```

```
d:\proj\bootcamp-django> python filesaya.py runserver
```

```
(hsi) D:\proj\bootcamp-django>python filesaya.py runserver
Mengimport Django!! BERHASIL
Mengimport Django!! BERHASIL

System check identified no issues (0 silenced).
November 20, 2020 - 05:16:19
Django version 2.2.1, using settings 'configsaya'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.
```

← → ↻ ⓘ localhost:8000

A server error occurred. Please contact the administrator.

```
AttributeError: 'Settings' object has no attribute 'ROOT_URLCONF'
```

Tambah ROOT_URLCONF = 'urlsaya'

configsaya.py

```
SECRET_KEY = 'katasandisayainisusah'  
DEBUG = True  
ROOT_URLCONF = 'urlsaya'
```

```
d:\proj\bootcamp-django> python filesaya.py runserver
```

```
ModuleNotFoundError: No module named 'urlsaya'
```

Buat file urlsaya.py (kosong)

urlsaya.py

```
d:\proj\bootcamp-django> python filesaya.py runserver
```

The included URLconf 'urlsaya' does not appear to have any patterns in it. If you see valid patterns in the file then the issue is probably caused by a circular import.

Update file urlsaya.py

urlsaya.py

```
urlpatterns = []
```

```
d:\proj\bootcamp-django> python filesaya.py runserver
```

The install worked successfully! Congratulations!
